

TrenStar

TrenStar offers a range of plastic bins to meet the diverse requirements of the ever changing supply chain needs. Manufactured from polypropylene, these injection moulded plastic bins are extremely robust and durable. Stackability and nestability enable a cost effective returnable option to disposable packaging.

The "one piece" plastic bin offers a lid that can be sealed to ensure a tamper evident solution for the high value item supply chain as well as offering a lid that will not be mislaid. These high value / high risk products include but are not limited to: electrical goods, computer hardware and software, mobile phones and pharmaceutical supplies. This solution is also very effective in an environment where a packaged product is handled by many people.

PLASTIC BINS

There are 4 standard bin sizes in the range with all having the following features:

- Sealable / Lockable Lids
- Slightly tapered side walls for nestability and optimum space utilisation on return leg shipments.

All TrenStar units are fitted with a unique identification number. Units are either bar coded, or fitted with bar coding and RFID to facilitate tracking and tracing throughout the supply chain.

A wide variety of TrenStar customers across a wide spectrum of industries have embraced this form of tamper evident packaging including FMCG and associated industries, pharmaceutical component manufacturers, automotive manufacturers and the chemical industry.
